

LASTEC®

Manufacturer of the
World's Only High-Definition
Articulating Mowers

TURF MODEL 3696

Lastec's Highest Production Articulating Rotary Mower

The Model 3696 is Lastec's top of the line self-contained Articulator. Our most productive machine cuts a path 96" wide and will match the productivity of competitor's machines costing 30-50% more. The unique features of this mower are its zero-turn maneuverability and its 30" side reaching capability. If your cutting needs include pond banks, overhangs near sand traps, deep grass bunkers, or the need to reach under low limbs or obstacles, there isn't a machine at any price that will deliver as well as the 3696.

The efficiency of Lastec's patented belt drive system also allows the 3696 to cut at higher ground speeds than mowers with hydraulically powered decks that require far greater horsepower and fuel consumption.
